# SEATED BODYWEIGHT CALF RAISES

## STEP 1: SETUP

While holding onto a stable fixture for support, get down into a squat position with your toes facing forward and feet set at about shoulder width apart. Let your heel come down towards the ground as far as they can.

## STEP 2

Push straight up onto your toes as far as you can, keeping most of the pressure on your big toe. Control your heel slowly back down towards the ground as far as they'll go, and then repeat for another rep.
