STANDING CABLE CURL

STEP 1: SETUP

Attach a bar to a pulley set at the lowest height. If you have access to a curled bar, use that, otherwise a straight bar can work. Grip the bar with an underhand shoulder-width grip and then take a small step back away from the cable, letting your arms hang down in front of your thighs.

STEP 2

Brace your core and squeeze your glutes to stabilize your body. Then, while keeping your elbow locked into place, curl the bar up towards your shoulders. Lower the weight back down to the starting position with your arms fully extended, and then repeat for another rep.
