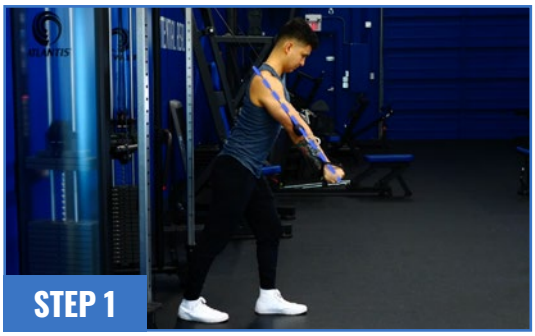
STANDING HIGH TO LOW CABLE FLYES

STEP 1: SETUP

Stand between a cable setup with the pulleys set at the highest position. Grab each handle, take a step or two away from the cable, get into a staggered stance position for support, and bring your arms down and slightly in front of your body with your palms facing each other. You want to set up such that at this bottom position, the line of the cable is inline with your forearms and your arm in line with the side of your chest.



STEP 2

Set your weight, grab the handles and get back into your starting position. Brace your core. Control the weight up while slightly bending your elbows until you get to about shoulder height. Then, using your lower chest muscles, move your arms down and in together until they fully straighten. Think about pulling your arms together as if you were trying to touch your biceps together to move the weight to better engage your chest.

STEP 2 VARIATION: WITH HALF REPS

Once you can't do any more reps, extend the set by doing as many half reps as you can until you reach complete failure. You can apply this same technique if you choose one of the exercise alternatives instead. And if you need a refresher on the proper form for this exercise, here's the tutorial.
